Question 7 continued	blar

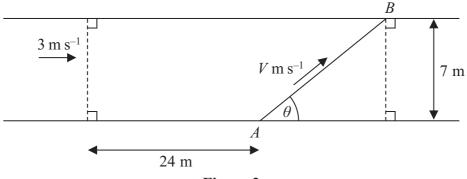

Figure 2

Kate crosses a road, of constant width 7 m, in order to take a photograph of a marathon runner, John, approaching at 3 m s^{-1} .

Kate is 24 m ahead of John when she starts to cross the road from the fixed point A. John passes her as she reaches the other side of the road at a variable point B, as shown in Figure 2.

Kate's speed is $V \, \mathrm{m} \, \mathrm{s}^{-1}$ and she moves in a straight line, which makes an angle θ , $0 < \theta < 150^{\circ}$, with the edge of the road, as shown in Figure 2.

You may assume that V is given by the formula

$$V = \frac{21}{24\sin\theta + 7\cos\theta}, \qquad 0 < \theta < 150^{\circ}$$

(a) Express $24\sin\theta + 7\cos\theta$ in the form $R\cos(\theta - \alpha)$, where R and α are constants and where R > 0 and $0 < \alpha < 90^{\circ}$, giving the value of α to 2 decimal places.

(3)

Given that θ varies,

(b) find the minimum value of *V*.

(2)

Given that Kate's speed has the value found in part (b),

(c) find the distance AB.

(3)

Given instead that Kate's speed is 1.68 m s⁻¹,

(d) find the two possible values of the angle θ , given that $0 < \theta < 150^{\circ}$.
