

# Mark Scheme (Results)

Summer 2016

Pearson Edexcel GCE in Core Mathematics 1 (6663/01)

# **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

#### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

# General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

# PEARSON EDEXCEL GCE MATHEMATICS

#### **General Instructions for Marking**

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- **\*** The answer is printed on the paper or ag- answer given
- \_\_\_\_ or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

## **General Principles for Core Mathematics Marking**

(But note that specific mark schemes may sometimes override these general principles).

# Method mark for solving 3 term quadratic:

# 1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where  $|pq| = |c|$ , leading to  $x = \dots$ 

 $(ax^2+bx+c) = (mx+p)(nx+q)$ , where pq = |c| and |mn| = |a|, leading to  $x = \dots$ 

# 2. Formula

Attempt to use the correct formula (with values for a, b and c).

### 3. Completing the square

Solving 
$$x^2 + bx + c = 0$$
:  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

#### Method marks for differentiation and integration:

# 1. Differentiation

Power of at least one term decreased by 1. ( $x^n \rightarrow x^{n-1}$ )

# 2. Integration

Power of at least one term increased by 1. ( $x^n \rightarrow x^{n+1}$ )

# Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

Question Number	Scheme	Notes	Marks
1		$\int (2x^4 - \frac{4}{\sqrt{x}} + 3) \mathrm{d}x$	
	$\frac{2}{5}x^5 - \frac{4}{\frac{1}{2}}x^{\frac{1}{2}} + 3x$	M1: $x^n \to x^{n+1}$ . One power increased by 1 but not for just + c. This could be for $3 \to 3x$ or for $x^n \to x^{n+1}$ on what they think $\frac{1}{\sqrt{x}}$ is as a power of x. A1: One of these 3 terms correct. Allow un-simplified e.g. $\frac{2x^{4+1}}{4+1}$ , $-\frac{4x^{-\frac{1}{2}+1}}{-\frac{1}{2}+1}$ , $3x^1$ A1: Two of these 3 terms correct. Allow un-simplified e.g. $\frac{2x^{4+1}}{4+1}$ , $-\frac{4x^{-\frac{1}{2}+1}}{-\frac{1}{2}+1}$ , $3x^1$	M1A1A1
	$=\frac{2}{5}x^5 - 8x^{\frac{1}{2}} + 3x + c$	<b>Complete fully correct simplified expression appearing all</b> <b>on one line with constant.</b> Allow 0.4 for $\frac{2}{5}$ . Do not allow $3x^1$ for $3x$ Allow $\sqrt{x}$ or $x^{0.5}$ for $x^{\frac{1}{2}}$	A1
	Ignore any spurious integral signs and ignore subsequent working following a fully		
		correct answer.	[4]
			4 marks

Question Number	Scheme	Notes	Marks	
2	$9^{3x+1} = \text{for example}$ $3^{2(3x+1)} \text{ or } (3^2)^{3x+1} \text{ or } (3^{(3x+1)})^2 \text{ or } 3^{3x+1} \times 3^{3x+1}$ $\text{or } (3\times3)^{3x+1} \text{ or } 3^2 \times (3^2)^{3x} \text{ or } (9^{\frac{1}{2}})^y \text{ or } 9^{\frac{1}{2}y}$	Expresses $9^{3x+1}$ correctly as a power of 3 or expresses $3^y$ correctly as a power of 9 or expresses y correctly in terms of x	M1	
	or $y = 2(3x+1)$	(This mark is <u>not</u> for just $3^2 = 9$ )		
	= $3^{6x+2}$ or $y = 6x + 2$ or $a = 6, b = 2$	Cao (isw if necessary)	A1	
	Providing there is no incorrect work, allow sight of $6x + 2$ to score both marks			
	Correct answer only in			
	<b>Special case:</b> $3^{6x+1}$ on	ly scores M1A0		
			[2]	
	Alternative u	ising logs		
	$9^{3x+1} = 3^y \Longrightarrow \log 9^{3x+1} = \log 3^y$			
	$(3x+1)\log 9 = y\log 3$	Use power law correctly on both sides	M1	
	$y = \frac{\log 9}{\log 3} (3x+1)$			
	y = 6x + 2	cao	A1	
			2 marks	

Question	Scheme	Notes	Ma	rks
Number				-
3.(a)	$\sqrt{50} - \sqrt{18} = 5\sqrt{2} - 3\sqrt{2}$	$\sqrt{50} = 5\sqrt{2}$ or $\sqrt{18} = 3\sqrt{2}$ and the other term in the form $k\sqrt{2}$ . This mark may be implied by the correct answer $2\sqrt{2}$	M1	
	$= 2\sqrt{2}$	Or $a = 2$	A1	
				[2]
(b) WAY 1	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$=\frac{12\sqrt{3}}{"2"\sqrt{2}}\times\frac{\sqrt{2}}{\sqrt{2}}=\frac{12\sqrt{6}}{4}$	Rationalises the denominator by a correct method e.g. multiplies numerator and denominator by $k\sqrt{2}$ to obtain a multiple of $\sqrt{6}$ . Note that multiplying numerator and denominator by $2\sqrt{2}$ or $-2\sqrt{2}$ is quite common and is acceptable for this mark. May be implied by a correct answer. <b>This is dependent on the first M1.</b>	dM1	
	$= 3\sqrt{6}$ or $b = 3, c = 6$	Cao and cso	A1	
				[3]
(b) WAY 2	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} \times \frac{\sqrt{50} + \sqrt{18}}{\sqrt{50} + \sqrt{18}}$ or $\frac{12\sqrt{3}}{5\sqrt{2} - 3\sqrt{2}} \times \frac{5\sqrt{2} + 3\sqrt{2}}{5\sqrt{2} + 3\sqrt{2}}$	For rationalising the denominator by a correct method i.e. multiplying numerator and denominator by $k\left(\sqrt{50} + \sqrt{18}\right)$	M1	
	$\frac{60\sqrt{6} + 36\sqrt{6}}{50 - 18}$	For replacing numerator by $\alpha \sqrt{6} + \beta \sqrt{6}$ . This is dependent on the first M1 and there is no need to consider the denominator for this mark.	dM1	
	$= 3\sqrt{6}$ or $b = 3, c = 6$	Cao and cso	A1	
				[3]
(b) WAY 3	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$=\frac{12\sqrt{3}}{2\sqrt{2}}=\frac{6\sqrt{3}}{\sqrt{2}}=\frac{\sqrt{108}}{\sqrt{2}}=\sqrt{54}=\sqrt{9}\sqrt{6}$	Cancels to obtain a multiple of $\sqrt{6}$ . This is dependent on the first M1.	dM1	
	$= 3\sqrt{6}$ Or $b = 3, c = 6$	Cao and cso	A1	
				[3]
(b) WAY 4	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$\left(\frac{12\sqrt{3}}{n_2n_2\sqrt{2}}\right)^2 = \frac{432}{8}$			
	$\sqrt{54} = \sqrt{9}\sqrt{6}$	Obtains a multiple of $\sqrt{6}$ . This is dependent on the first M1.	dM1	
	$= 3\sqrt{6}$ Or $b = 3, c = 6$	Cao and cso (do not allow $\pm 3\sqrt{6}$ )	A1	
			5 ma	ırks

Question Number	Scheme	Notes	Marks
	Note original points are A	A(-2, 4) and $B(3, -8)$	
4.(a)	(-2, 12)	Similar shape to given figure passing through the origin. A cubic shape with a maximum in the second quadrant and a minimum in the 4 <sup>th</sup> quadrant. There must be evidence of a change in at least one of the y-coordinates (inconsistent changes in the y-coordinates are acceptable) but <b>not the </b> $x$ - <b>coordinates</b> .	B1
	(3, -24)	Maximum at (-2, 12) and minimum at $(3, -24)$ with coordinates written the right way round. Condone missing brackets. The coordinates may appear on the sketch, or separately in the text (not necessarily referenced as <i>A</i> and <i>B</i> ). If they are on the sketch, the <i>x</i> and <i>y</i> coordinates can be positioned correctly on the axes rather than given as coordinate pairs. In cases of ambiguity, the sketch has precedence. The origin does not need to be labelled. Nor do the <i>x</i> and <i>y</i> axes.	B1
			[2]
(b)	<b>↑</b>	A positive cubic which does not pass through the origin with a maximum to the left of the <i>y</i> -axis and a minimum to the right of the <i>y</i> -axis.	M1
	(-2, 0)	Maximum at (-2, 0) and minimum at (3, -12). Condone missing brackets. For the max allow just -2 or (0, -2) if marked in the correct place. If the coordinates are in the text, they must appear as (-2, 0) and must not contradict the sketch. The curve must <b>touch</b> the <i>x</i> -axis at (-2, 0). For the min allow coordinates as shown or 3 and -12 to be marked in the correct places on the axes. In cases of ambiguity, the sketch has precedence.	A1
	(3, -12)	Crosses y-axis at $(0, -4)$ . Allow just -4 (not +4) and allow (-4, 0) if marked in the correct place. If the coordinates are in the text, they must appear as $(0, -4)$ and must not contradict the sketch. In cases of ambiguity, the sketch has precedence.	A1
			[3]
			5 marks

Question Number	Scheme	Notes	Marks	
	WA	AY 1		
	y = -4x - 1	Attempts to makes <i>y</i> the subject of the linear		
5.	$\Rightarrow (-4x-1)^2 + 5x^2 + 2x = 0$	equation and substitutes into the other equation. Allow slips e.g. substituting $y = -4x + 1$ etc.	M1	
	$21x^2 + 10x + 1 = 0$	Correct 3 term quadratic (terms do not need to be all on the same side).	A1	
	$(7x+1)(3x+1)=0 \Longrightarrow (x=)-\frac{1}{7}, -\frac{1}{3}$	The "= 0" may be implied by subsequent work. dM1: Solves a <b>3 term</b> quadratic by the usual rules (see general guidance) to give at least one value for <i>x</i> . <b>Dependent on the first method</b> <b>mark.</b> A1: $(x = ) - \frac{1}{7}, -\frac{1}{3}$ (two separate correct exact answers). Allow exact equivalents e.g. $(x = ) -\frac{6}{42}, -\frac{14}{42}$	dM1 A1	
	$y = -\frac{3}{7}, \frac{1}{3}$	M1: Substitutes to find at least one <i>y</i> value (Allow substitution into their rearranged equation above but not into an equation that has not been seen earlier). You may need to check here if there is no working and <i>x</i> values are incorrect. A1: $y = -\frac{3}{7}$ , $\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $y = -\frac{18}{42}$ , $\frac{14}{42}$	M1 A1	
	Coordinates do no	ot need to be paired		
	Note that if the linear equation is explicitly rearranged to $y = 4x + 1$ , this gives the correct			
	answers for x and possibly for y. In these cases, if it is not already lost, deduct the final A1.			
	WAY 2			
	$x = -\frac{1}{4}y - \frac{1}{4}$ $\Rightarrow y^{2} + 5(-\frac{1}{4}y - \frac{1}{4})^{2} + 2(-\frac{1}{4}y - \frac{1}{4}) = 0$	Attempts to makes <i>x</i> the subject of the linear equation and substitutes into the other equation. Allow slips in the rearrangement as above.	M1	
	$\frac{21}{16}y^2 + \frac{1}{8}y - \frac{3}{16} = 0 \left(21y^2 + 2y - 3 = 0\right)$	Correct 3 term quadratic (terms do not need to be all on the same side). The "= 0" may be implied by subsequent work.	A1	
	$(7y+3)(3y-1)=0 \Longrightarrow (y=)-\frac{3}{7}, \frac{1}{3}$	dM1: Solves a <b>3 term</b> quadratic by the usual rules (see general guidance) to give at least one value for y. <b>Dependent on the first method</b> mark. A1: $(y = ) - \frac{3}{7}, \frac{1}{3}$ (two separate correct exact answers). Allow exact equivalents e.g. $(y = ) -\frac{18}{42}, \frac{14}{42}$	dM1 A1	
		M1: Substitutes to find at least one <i>x</i> value (Allow substitution into their rearranged equation above but not into an equation that has not been seen earlier). You may need to check	M1 A 1	
	$x = -\frac{1}{7}, -\frac{1}{3}$	here if there is no working and y values are incorrect. A1: $x = -\frac{1}{7}$ , $-\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $x = -\frac{6}{7}$	M1 A1	
		incorrect. A1: $x = -\frac{1}{7}$ , $-\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $x = -\frac{6}{42}$ , $-\frac{14}{42}$	MIAI	
	Coordinates do no	incorrect. A1: $x = -\frac{1}{7}$ , $-\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $x = -\frac{6}{42}$ , $-\frac{14}{42}$ ot need to be paired		
	Coordinates do no Note that if the linear equation is explicitly re	incorrect. A1: $x = -\frac{1}{7}$ , $-\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $x = -\frac{6}{42}$ , $-\frac{14}{42}$ ot need to be paired earranged to $x = (y + 1)/4$ , this gives the correct		
	Coordinates do no Note that if the linear equation is explicitly re	incorrect. A1: $x = -\frac{1}{7}$ , $-\frac{1}{3}$ (two correct exact answers) Allow exact equivalents e.g. $x = -\frac{6}{42}$ , $-\frac{14}{42}$ ot need to be paired	MI AI	

Question Number	Scheme	Notes	Marks
	$a_1 = 4, \ a_{n+1} = 5 - k$	$a_n, n1$	
<b>6.</b> (a)	$a_2 = 5 - ka_1 = 5 - 4k$ $a_3 = 5 - ka_2 = 5 - k(5 - 4k)$	M1: Uses the recurrence relation correctly at least once. This may be implied by $a_2 = 5-4k$ or by the use of $a_3 = 5-k$ (their $a_2$ ) A1: Two correct expressions – need not be simplified but must be seen in (a).	M1A1
		Allow $a_2 = 5-k4$ and $a_3 = 5-5k+k^24$ Isw if necessary for $a_3$ .	
-			[2]
(b)	$\sum_{r=1}^{3} (1) = 1 + 1 + 1$	Finds 1+1+1 or 3 somewhere in their solution (may be implied by e.g. $5 + 6 - 4k$ $+ 6 - 5k + 4k^2$ ). Note that $5 + 6 - 4k + 6 - 5k + 4k^2$ would score B1 and the M1 below.	B1
	$\sum_{r=1}^{3} a_r = 4 + "5 - 4k" + "5 - 5k + 4k^2"$	Adds 4 to their $a_2$ and their $a_3$ where $a_2$ and $a_3$ are functions of k. The statement as shown is sufficient.	M1
	$\sum_{r=1}^{3} (1+a_r) = 17 - 9k + 4k^2$	Cao but condone '= 0' after the expression	A1
	Allow full marks in (b) for a	correct answer only	
			[3]
(c)	500	Ca0	B1 [1]
			6 marks

Question Number	Scheme	Notes	Marks		
7.	$y = 3x^2 + 6x^{\frac{1}{3}} + \frac{2x^3 - 7}{3\sqrt{x}}$				
	$\frac{2x^3 - 7}{3\sqrt{x}} = \frac{2x^3}{3\sqrt{x}} - \frac{7}{3\sqrt{x}} = \frac{2}{3}x^{\frac{5}{2}} - \frac{7}{3}x^{-\frac{1}{2}}$	Attempts to split the fraction into 2 terms and obtains either $\alpha x^{\frac{5}{2}}$ or $\beta x^{-\frac{1}{2}}$ . This may be implied by a correct power of x in their differentiation of one of these terms. But beware of $\beta x^{-\frac{1}{2}}$ coming from $\frac{2x^3 - 7}{3\sqrt{x}} = 2x^3 - 7 + 3x^{-\frac{1}{2}}$	M1		
	$x^n \rightarrow x^{n-1}$	Differentiates by reducing power by one for any of their powers of $x$	M1		
		A1: 6x. Do not accept $6x^1$ . Depends on second M mark only. Award when first seen and isw.			
		A1: $2x^{-\frac{2}{3}}$ . Must be simplified so do not			
		accept e.g. $\frac{2}{1}x^{-\frac{2}{3}}$ but allow $\frac{2}{\sqrt[3]{x^2}}$ . Depends			
		on second M mark only. Award when first seen and isw.			
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = 6x + 2x^{-\frac{2}{3}} + \frac{5}{3}x^{\frac{3}{2}} + \frac{7}{6}x^{-\frac{3}{2}}$	A1: $\frac{5}{3}x^{\frac{3}{2}}$ . Must be simplified but allow e.g.	A1A1A1A1		
		$1\frac{2}{3}x^{1.5}$ or e.g. $\frac{5}{3}\sqrt{x^3}$ . Award when first seen and isw.			
		A1: $\frac{7}{6}x^{-\frac{3}{2}}$ . Must be simplified but allow e.g.			
		$1\frac{1}{6}x^{-1\frac{1}{2}}$ or e.g. $\frac{7}{6\sqrt{x^3}}$ . Award when first seen and isw.			
	In an otherwise <u>fully correct solution</u> , penalis	se the presence of + c by deducting the final			
	A1		[6]		
	Use of Quotient Rule: First M1 and f	final A1A1 (Other marks as above)			
	$\frac{d\left(\frac{2x^{3}-7}{3\sqrt{x}}\right)}{dx} = \frac{3\sqrt{x}\left(6x^{2}\right) - \left(2x^{3}-7\right)\frac{3}{2}x^{-\frac{1}{2}}}{\left(3\sqrt{x}\right)^{2}}$	Uses <u>correct</u> quotient rule	M1		
	$=\frac{10x^{\frac{3}{2}}+7x^{-\frac{1}{2}}}{6x}$	A1: Correct first term of numerator and correct denominator A1: All correct as simplified as shown	A1A1		
	So $\frac{dy}{dx} = 6x + 2x^{-\frac{2}{3}} + \frac{10x^{\frac{5}{2}}}{10x^{\frac{5}{2}}}$	$\frac{1}{6}$ + $7x^{-\frac{1}{2}}$ scores full marks			
	<u>u</u> <i>x</i>		6 marks		

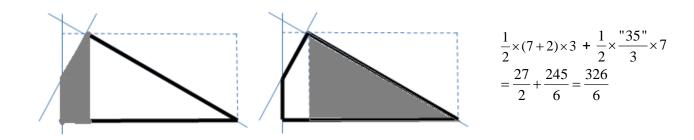

Question Number	Scheme	Notes	Marks		
<b>8.</b> (a)	$2px^{2}-6px+4p" = "3x-7$ or $y = 2p\left(\frac{y+7}{3}\right)^{2}-6p\left(\frac{y+7}{3}\right)+4p$	<b>Either:</b> Compares the given quadratic expression with the given linear expression using $\langle , \rangle $ , = , $\neq$ (May be implied) <b>or</b> Rearranges $y = 3x - 7$ to make <i>x</i> the subject and substitutes into the given quadratic	M1		
	$2px^{2}-6px+4p-3x+7(=0)$ $2p\left(\frac{y+7}{3}\right)^{2}-6p\left(\frac{y+7}{3}\right)+4p-y\left(\frac{y+7}{3}\right)+4p-$	$\frac{\text{amples}}{p_{1}}, -2px^{2} + 6px - 4p + 3x - 7(=0)$ $= 0),  2py^{2} + (10p - 9)y + 8p(=0)$ $\frac{6px + 4p - 3x + 7}{q_{2}}$ sign errors only. Ignore > 0, < 0, = 0 etc.	dM1		
	The terms do not need to be collected. Dependent on the first method mark.				
	E.g. $b^2 - 4ac = (-6p - 3)^2 - 4(2p)(4p + 7)$ $b^2 - 4ac = (10p - 9)^2 - 4(2p)(8p)$	Attempts to use $b^2 - 4ac$ with their <i>a</i> , <i>b</i> and <i>c</i> where $a = \pm 2p$ , $b = \pm (-6p \pm 3)$ and $c = \pm (4p \pm 7)$ or for the quadratic in <i>y</i> , $a = \pm 2p$ , $b = \pm (10p \pm 9)$ and $c = \pm 8p$ . This could be as part of the quadratic formula or as $b^2 < 4ac$ or as $b^2 > 4ac$ or as $\sqrt{b^2 - 4ac}$ etc. If it is part of the quadratic formula only look for use of $b^2 - 4ac$ . There must be no <i>x</i> 's or <i>y</i> 's. <b>Dependent on both method marks.</b>	ddM1		
	$4p^2 - 20p + 9 < 0 *$	Obtains printed answer with <b>no errors</b> seen (Allow $0 > 4p^2 - 20p + 9$ ) <b>but this</b> < 0 must been seen at some stage before the last line.	A1*		
(b)	$(2p-9)(2p-1)=0 \Longrightarrow p=$ to obtain $p=$	Attempt to solve the <b>given</b> quadratic to find 2 values for <i>p</i> . See general guidance.	[4] M1		
	$p = \frac{9}{2},  \frac{1}{2}$	Both correct. May be implied by e.g. $p < \frac{9}{2}$ , $p < \frac{1}{2}$ . Allow equivalent values e.g. 4.5, $\frac{36}{8}$ , 0.5 etc. If they use the quadratic formula allow $\frac{20\pm16}{8}$ for this mark but not $\sqrt{256}$ for 16 and allow e.g. $\frac{5}{2}\pm2$ if they complete the square. M1: Chooses 'inside' region i.e. Lower Limit < $p$ < Upper Limit or e.g.	Al		
	$\frac{1}{2} Allow equivalent values e.g. \frac{36}{8} for 4\frac{1}{2}$	Lower Limit $ Lower Limit \leq p \leq \text{Upper Limit}A1: Allow p \in (\frac{1}{2}, 4\frac{1}{2}) or just (\frac{1}{2}, 4\frac{1}{2}) andallow p > \frac{1}{2} and p < 4\frac{1}{2} and 4\frac{1}{2} > p > \frac{1}{2} butp > \frac{1}{2}, p < 4\frac{1}{2} scores M1A0\frac{1}{2} > p > 4\frac{1}{2} scores M0A0$	M1A1		
	Allow working in terms of $x$ in (b) but the an	swer must be in terms of <i>p</i> for the final A mark.	[4]
