INSTRUCTIONS TO CANDIDATES

- Write your Name, Centre Number and Candidate Number in the spaces provided on the answer booklet.
- Answer all the questions.
- Give non-exact numerical answers correct to 3 significant figures, unless a different degree of accuracy is specified in the question or is clearly appropriate.
- You are permitted to use a graphic calculator in this paper.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.
- Questions carrying smaller numbers of marks are printed earlier in the paper, and questions carrying larger numbers of marks later in the paper.
- You are reminded of the need for clear presentation in your answers.

1 Use formulae for $\sum_{i=1}^{n} r_i$ and $\sum_{i=1}^{n} r_i^2$ to show that

$$\sum_{r=1}^{n} r(r+1) = \frac{1}{3}n(n+1)(n+2).$$
 [5]

- 2 The cubic equation $x^3 6x^2 + kx + 10 = 0$ has roots p q, p and p + q, where q is positive.
 - (i) By considering the sum of the roots, find p. [2]
 - (ii) Hence, by considering the product of the roots, find q. [3]
 - (iii) Find the value of k. [3]
- 3 The complex number 2+i is denoted by z, and the complex conjugate of z is denoted by z^* .
 - (i) Express z^2 in the form x + i y, where x and y are real, showing clearly how you obtain your answer. [2]
 - (ii) Show that $4z z^2$ simplifies to a real number, and verify that this real number is equal to zz^* . [3]
 - (iii) Express $\frac{z+1}{z-1}$ in the form x+iy, where x and y are real, showing clearly how you obtain your answer. [3]
- 4 A sequence u_1, u_2, u_3, \dots is defined by

$$u_n = 3^{2n} - 1$$
.

(i) Write down the value of u_1 . [1]

(ii) Show that
$$u_{n+1} - u_n = 8 \times 3^{2n}$$
. [3]

(iii) Hence prove by induction that each term of the sequence is a multiple of 8. [4]

5 (i) Show that

$$\frac{1}{2r-1} - \frac{1}{2r+1} = \frac{2}{4r^2 - 1}.$$
 [2]

(ii) Hence find an expression in terms of n for

$$\frac{2}{3} + \frac{2}{15} + \frac{2}{35} + \dots + \frac{2}{4n^2 - 1}.$$
 [4]

(iii) State the value of

(a)
$$\sum_{r=1}^{\infty} \frac{2}{4r^2 - 1}$$
, [1]

(b)
$$\sum_{r=n+1}^{\infty} \frac{2}{4r^2 - 1}.$$
 [1]

- 6 In an Argand diagram, the variable point *P* represents the complex number z = x + i y, and the fixed point *A* represents a = 4 3i.
 - (i) Sketch an Argand diagram showing the position of A, and find |a| and $\arg a$. [4]
 - (ii) Given that |z-a|=|a|, sketch the locus of P on your Argand diagram. [3]
 - (iii) Hence write down the non-zero value of z corresponding to a point on the locus for which

(b)
$$\arg z = \arg a$$
. [2]

- 7 The matrix **A** is given by $\mathbf{A} = \begin{pmatrix} 1 & -2 \\ 2 & 1 \end{pmatrix}$.
 - (i) Draw a diagram showing the unit square and its image under the transformation represented by A. [3]
 - (ii) The value of det A is 5. Show clearly how this value relates to your diagram in part (i). [3]

A represents a sequence of two elementary geometrical transformations, one of which is a rotation *R*.

- (iii) Determine the angle of R, and describe the other transformation fully. [3]
- (iv) State the matrix that represents R, giving the elements in an exact form. [2]

4725 Specimen Paper [Turn over

- 8 The matrix **M** is given by $\mathbf{M} = \begin{pmatrix} a & 2 & -1 \\ 2 & 3 & -1 \\ 2 & -1 & 1 \end{pmatrix}$, where a is a constant.
 - (i) Show that the determinant of \mathbf{M} is 2a. [2]
 - (ii) Given that $a \neq 0$, find the inverse matrix \mathbf{M}^{-1} .
 - (iii) Hence or otherwise solve the simultaneous equations

$$x+2y-z=1,$$

 $2x+3y-z=2,$ [3]
 $2x-y+z=0.$

(iv) Find the value of k for which the simultaneous equations

$$2y-z=k,$$

$$2x+3y-z=2,$$

$$2x-y+z=0,$$

have solutions. [3]

(v) Do the equations in part (iv), with the value of k found, have a solution for which x = z? Justify your answer.
